

Security Survey

Our consultants are highly adept at evaluating the physical property of a company or organization and providing a comprehensive report on any and all security strengths and vulnerabilities.

Utilizing principles of CPTED (Crime Prevention Through Environmental Design) coupled with extensive experience in the study of criminal behavior, Sentinel Consulting Group is able to effectively recommend environmental and technological changes to a facility.

CPTED Principle

Multi-disciplinary approach based upon the ability to influence offender behavior & decisions that precede criminal acts.

CPTED Strategies

Natural Surveillance - increase the threat of apprehension by increasing the potential for a criminal to be seen.

Access Control - limit the potential for crime by differentiating between public and private areas.

Territorial Reinforcement- promotes social control through increased definition of space and improved proprietary concern.
